

Meet Betty Mase, Human Resource Specialist

The company has grown, the industry has changed and we've all had to adjust. Employee relations (human resources) and workplace safety are two areas we've seen significant change. Thankfully, our Betty Mase digs deeply into those challenges for Geotech Services, Inc. and helps us coordinate those programs.

"I've been with the company nearly 18 years and I've seen quite a few changes," says Betty. "We have always been big on employee training and safety, so that's not new, but there are lots of regulations in our industry that require that we keep a close eye on training needs and documentation."

The Garfield Heights, Ohio native has worn many different hats for Geotech Services during her time here. Mase graduated from Cleveland State University with a degree in elementary education. After teaching for a number of years she made a career change and joined the family-owned company. "When I came to Geotech I pitched in wherever help was needed. It's a family business, which I love and we all do whatever it takes to get things done," she adds. "We've also grown substantially, so I spend more time now on human resource responsibilities."

Betty schedules safety training, helps out in the accounting department in the payroll area and maintains documentation that is required by various regulatory agencies. "The variety of work I do, daily, makes it fun and interesting for me," says Betty.

Away from the office Mase makes time for regular workouts at the local fitness center, enjoys cooking and is an avid reader. "I have an eclectic taste in books, but I do love crime-based fiction and non-fiction," she laughs. "Lately I've been reading work by Tess Gerritsen, the writer for the TV show, 'Rizzoli and Isles' who is also a bestselling author (Life Support, Bloodstream, Gravity, and The Surgeon.). I love her stuff," she says.

Betty attends Church of the Resurrection in Solon, Ohio and has her sights set on doing more volunteer work there when she retires. "I'd love to do more with the church - especially with the kids," says the one-time school teacher. But until then, Mase has a full plate at Geotech Services which suits her fine. "This is a really close-knit group of people and we work hard but we have fun, too."
