

Meet Ted Webster, P.E.

Ted E. Webster, P.E. loves dirt. It's an affinity he developed as a teenager working on his grandfather's farm, parlayed it into a civil engineering education specializing in geotechnical applications and has nurtured it over five decades of his professional career. A licensed professional engineer in Ohio, Michigan and Pennsylvania, Webster has extensive experience analyzing soil and concrete issues and designing structural stabilization solutions. Today he is the Principal Engineer for Geotech Services, Inc. where he works daily with soil and rock related structures. Prior to joining Geotech Services in 2006, Ted led his own geotechnical/structural

engineering consulting firm for 22 years after stints with Master Builders (now BASF) and the Lee Truzillo Construction Company. He is an active member of the American Society of Civil Engineers, American Society for Testing & Materials (ASTM), American Concrete Institute (ACI), Post Tensioning Institute, Deep Foundations Institute and the International Association of Foundations. He was one of the three founders of the Northeast Ohio chapter of the ACI. Ted received his BS and MS in Civil Engineering from the University of Michigan.
